OneView

Reporting Without the Manual Effort

Your logo here

See Plant Performance In Real Time

OneView gives operations teams an enterprise view of performance across every site, with the ability to drill from roll-up scorecards down to a single plant or line. Switch between YTD, MTD, and WTD views with one click, and see the same information on desktop or mobile.

The Value of OneView

Enterprise View, Line-Level Detail

Start with a rollup across sites, then drill into a specific plant, line, or asset in a few clicks.

Mobile First Design

Designed around phone use, so OEE and line performance are easy to check on the floor or away from the control room.
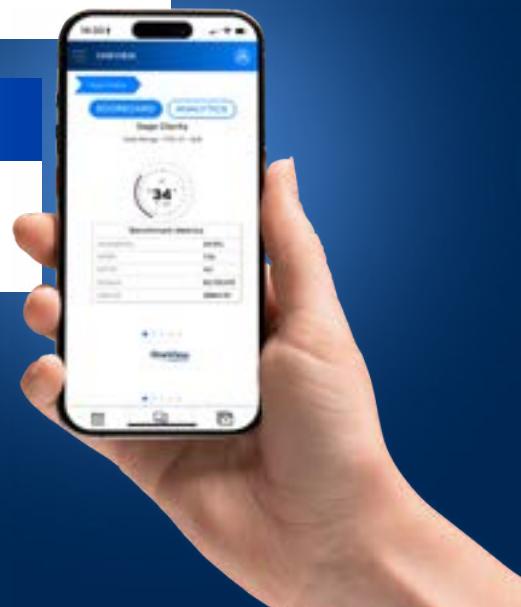

Collaboration with Context

Add comments to specific views so questions and decisions stay tied to the right plant, line, and timeframe.

Time-Period Performance Views

Switch year-to-date, month-to-date, or week-to-date views with a single on-click filter, no new report needed.

Metrics Built for the Plant Floor

- **Spot issues early –** See shifts in OEE, speed, or downtime as they happen, so problems don't wait for the next report.

- **Know which lines need attention –** Quickly identify which lines or machines are off target, so supervisors know where to focus first.

- **Keep teams aligned on performance –** Give operators, supervisors, and leaders a shared view of how production is running in real-time.

Value of OneView

- **Want clear line and machine performance data without building custom dashboards?**
  - OneView's metric app layout organizes key measures for each line, cell, and asset out of the box.

- **Need a consistent way to track OEE across plants?**
  - OneView acts as your metric app for availability, performance, quality, and OEE in the same structure at every site.

- **Struggling to see what's behind an OEE change?**
  - In OneView, you can drill from headline OEE into line and machine metrics, counts, speed loss, downtime, and more.
