

The Alarm Intelligence Suite for Ignition

The Right Alert. The Right Person. Every Time.

SmartSights delivers two focused solutions for Ignition users: faster alarm response via push-notifications in SmartSights Mobile, and ISA 18.2 alarm intelligence that transforms your Alarm Journal into actionable KPIs that improve operator focus and reduce alarm overload.

Fortune 500 Use Ignition

Built for Modern Operations

Fewer operators, rising expectations, and growing cybersecurity threats are the new normal in industrial environments.

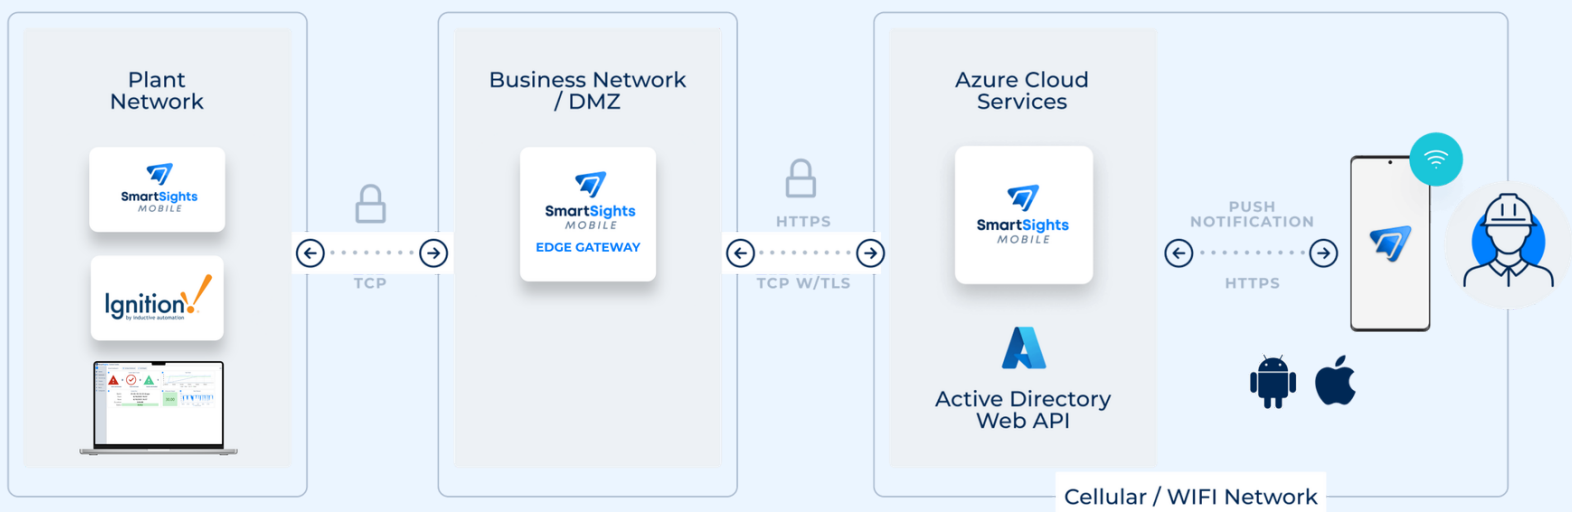

Alarm overload from thousands of low-priority conditions competing for attention causes decision paralysis and lets critical alerts slip through.

SmartSights solves this at two levels: getting the right notifications to the right people instantly and giving management the analytical tools to rationalize and reduce problem alarms at the source.

Designed For Security

Connect to your existing Ignition Gateway Network seamlessly and securely. Deliver instant alerts to operators, capture acknowledgements that sync with the SCADA, and maintain visibility whether you're managing a single plant, multiple facilities, or an enterprise-wide network.

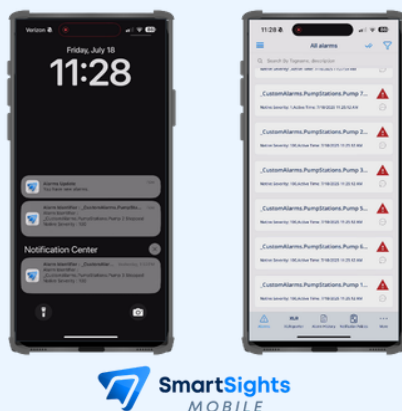

Not every Ignition deployment can extend Vision or Perspective outside the plant. SmartSights Mobile bridges that gap, delivering fast, intuitive remote monitoring on iOS and Android, with smartwatch support built in. Get your team connected to critical assets in minutes, not weeks.

Two Solutions. One Integrated Suite.

SmartSights Mobile

Never Miss a Critical Alarm

Alarm Rationalization KPI

From Journal to Actionable Intelligence

Seamless Ignition Integration

- WIN-911 subscribes to Ignition tags by path, severity, and more
- Routes the right alarms to the right people
- Alarm states sync between Vision, Perspective, and SmartSights Mobile

Deploys in Minutes

- Ignition Alarm Journal provides rich historical data.
- The SmartSights engine connects directly to existing data
- Out-of-box reports surface bad actors, chattering, floods and more

Simplified Remote Alarms

- Push notifications that wake devices from the lock screen
- Role-based live alarm lists and HMI alarm feed in a single, simple interface
- Used today in thousands of plants and with every major SCADA vendor

KPI Hierarchy Across the Enterprise

- Categorize by facility, area, or position.
- KPI scores are summarized at an enterprise level
- Ideal for complex systems in Oil & Gas, Water, and Manufacturing

Informed Coordinated Reponse

- Drill into alarm history, team escalation status, and group chat
- Diagnostic tag visualization and contact roster management on your phone
- Ideal for 24/7 Water & Wastewater operations

Beyond ISA 18.2

- Track alarm cycles across Ignition and SmartSights
- Export resolution notes to drive consistent operator responses
- From the enterprise scorecard, site level, to individual tags and setpoints, get the insight needed for continuous monitoring and improvement
